Download repository creation

Contents

Overview

It is possible to create a repository on the PINsafe server where users can download client software from.

Prerequisites

PINsafe appliance or software install

Creating the repository

Upload the required software to the pinsafe folder. Note: ensure that executable scripts are not uploaded to the PINsafe server:

For an PINsafe appliance

For information on uploading files to a PINsafe appliance see: WinSCP How To Guide

/usr/local/tomcat/webapps/pinsafe

or for the proxy port

/usr/local/tomcat/webapps2/proxy

For a Windows Server:

/Program Files/ Apache Software Foundation/Tomcat 6.0/webapps/pinsafe

or

/Program Files/ Apache Software Foundation/Tomcat 5.0/webapps/pinsafe

Testing

Browse to the file location which should give the opportunity to download the software:

PINsafe Appliance

https://<IP>:8080/pinsafe/<filename>

or

https://<IP>:8443/proxy/<filename>

Software Install

http://<IP>:8080/pinsafe/<filename>
