

Site ID

When creating a Site ID the customer will be asked to provide some information on how they intend to use Swivel Secure: see [SSD](#)

Other features are directly linked to the use of AuthControl Mobile App and its available options:

- PUSH (One Touch) authentication.
- PIN indicates whether or not the user enters their PIN in the mobile app and is shown the OTC, or has to extract the OTC from the security string.
- LOCAL - security strings are generated in the mobile app using TOTP, and are not requested from the appliance.
- OATH means that the mobile app generates one-time codes using TOTP.
