

Swift Payment Network Integration

Introduction

The Society for Worldwide Interbank Financial Telecommunication (SWIFT) provides a network that enables financial institutions worldwide to send and receive information about financial transactions in a secure, standardized and reliable environment.

Integration Overview

Since SWIFT is a closed source software and does not support RADIUS nor SAML, what we normally do in these situations, is to install Swivel Secure on the hosts that are allowed to access SWIFT.

We ensure the endpoint protection where the SWIFT machines/Servers/services are running.

We can protect with VPN integration or by our AuthControl Credential Provider integration.

Solution

We recommend that you contact your Swivel Secure account manager to book a scope call with one of our Solutions engineers.

To better understand your environment, your needs and to propose a solution.
