2) Network
3) Appliance
4) Backup and Restore
5) Tools and Utilities
6) Administration
8) System Status
9) Version Information
0) Exit

Select: _
```

Version 3 of the Swivel Appliance is a completely new version of the Appliance, redeveloped in order to:

1. Move to more up to date OS and Applications;
2. Move to a more structured and easier support development environment for the menu system;
3. Create an appliance that is easier to upgrade and patch after deployment.

Key Differences

- New Base Operating System based on Centos;
- New Appliance Database (based on MariaDB);
- Newer Versions of Java and Tomcat;
- Access to YUM type updates.

New Features

- New alerts for issues such as disk space;
- More diagnostics available without the need to drop to command line.

There is a [Quick Start Guide](#) available and a [Reference Guide](#) that lists the menus and their meanings.

There is also a number of How To articles to explain specific features that are listed [here](#)
